

data asset system

TRUCK

ingestion engine that extracts, loads, cleans, filters, and formats input data

TREK

inventory & quality management for all data moved to hadoop with predictive ontology, dictionary & governance delivery

TREE

intelligent, generative entity resolution & data enrichment engine that publishes all data aligned to a segment of one

ORION

real-time relationship discovery, visualization, traversal & querying engine to explore relationships, patterns & connections among entities

PUMPD

real-time, read efficient, front office application feeding engine with a secure REST API for rapid integration with existing systems

TIDES

real-time, fully distributed data asset visualization, discovery, query & aggregation engine with an interactive web interface

TEAS

at-scale machine learning engine for deploying, testing and training complex ML models certified for parallelization

ENRICH LIFE
